Art Unit: 3765

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows: the species illustrated in Figs. 1A-1C, Figs. 4A-4C, Fig. 7, and Figs. 9-12.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner: Claims 1-13 and 27-40 relate to a suturing means as shown in Figs. 1A-1C; Claims 14-17 relate to branch means for connecting a side vessel of a main blood vessel to a vascular prosthesis; Claims 18-24 relate to a first embodiment of a vascular prosthesis as illustrated in Fig. 7; Claims 25 and 26 relate to a second embodiment of a vascular prosthesis as illustrated in Figs. 9-12.

No claims are generic.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: the first three of the four claimed species relate to different medical devices which do not share the same or corresponding types of internal bodies; the third and fourth of the four claimed species

Art Unit: 3765

define different types of vascular prostheses which do not have the same or corresponding tubular bodies.
